Contents:

1	API reference	3
1.1	properties	3
1.2	core	3
1.3	tables	3
1.4	styles	3
2	Indices and tables	5

Convert XML input to PDF table. Since we forked the [upstream](#) this project has generalized quite a bit on the generation of a multipage PDF file containing a table with subtables each containing a subset of the xml tags based on the texts of some of their children tags.

For the *pyxml2pdf* homepage go to [GitHub](#).

pyxml2pdf is written in Python 3 and currently requires Python 3.6 or later.

1.1 properties

1.2 core

1.2.1 rows

1.2.2 events

1.2.3 initializer

1.2.4 parser

1.2.5 post_processor

1.2.6 sorter

1.3 tables

1.3.1 tables

1.3.2 builder

1.4 styles

1.4.1 table_styles

CHAPTER 2

Indices and tables

- `genindex`
- `modindex`
- `search`
